Taxing Tobacco: Why the 2023 Budget Should Increase Tobacco Taxes

Published 2 months ago on 2022/11/11

The Proposed Simple Formula for Cigarette Taxes

$$T' = T (1 + (\pi + g + 4)/100)$$

Where:

T' – next year's tax rate

T – current tax year rate

4 – exogenous adjustment factor

π – current year inflation

g – current year GDP growth rate

Note: The inflation rate and GDP growth rate can be obtained from Central Bank data. The maximum value that could be assigned to the inflation rate is 10 (i.e., any inflation rate above 10 is to be given a value of 10 in the formula). This is to prevent any large inflationary shocks leading to extreme price rises. A minimum value of 0 is to be assigned to both the GDP growth rate and the inflation rate (i.e., any negative GDP growth is to be assigned a value of 0). This is to prevent government revenue from falling in any given year.

By an IPS Research Team

Sri Lanka's economy is at a critical juncture where urgent steps are needed to improve the country's fiscal position. The Institute of Policy Studies of Sri Lanka (IPS) has maintained that increasing tobacco taxation has undeniable health and fiscal benefits. In this context, policy solutions, such as taxing tobacco which can be leveraged to boost government revenue without threatening economic growth, are essential. This blog argues that the 2023 Budget should introduce a model of indexation which automatically links tobacco taxation rises with the size of the economy and inflation. This would raise substantial additional revenue from the excise tax on cigarettes.

The Right Time to Raise Taxes

The current economic crisis and the intense pressure on the health system mean there is no better time to raise tobacco taxes in Sri Lanka. Among the benefits of increasing tobacco taxes are the generation of additional revenue for the government, widespread support among the public for an increase in tobacco taxation, and the reduced burden on Sri Lanka's struggling health system.

A tax targeting a 'sin product' like tobacco will contribute to the government's ongoing efforts to help raise revenue without increasing the costs of essential goods at a critical time for the economy. According to a poll conducted by the Alcohol and Drug Information Centre (ADIC) in September 2021, 91.5% of respondents said they would support increasing tobacco taxation to boost government revenue. Accordingly, this is a tax move the government can introduce, which will have a near-universal public endorsement. Further, driving down tobacco consumption by increasing prices, particularly of the most harmful cigarettes, will reduce tobacco-caused illnesses and ease pressure on the health system when Sri Lanka's healthcare system is facing severe medical shortages due to the economic crisis.
